Executive Summary

This report analyzes housing investment attractiveness across 9 major European markets using housing affordability, investment potential, and forecast-driven growth indicators. The project combines Python-based analytics, SQL-driven business intelligence workflows, and Tableau dashboard storytelling to identify markets with the strongest long-term investment opportunities. Portugal emerged as the strongest overall investment market based on projected growth potential, while Austria demonstrated the most balanced and stable market conditions.

Methodology

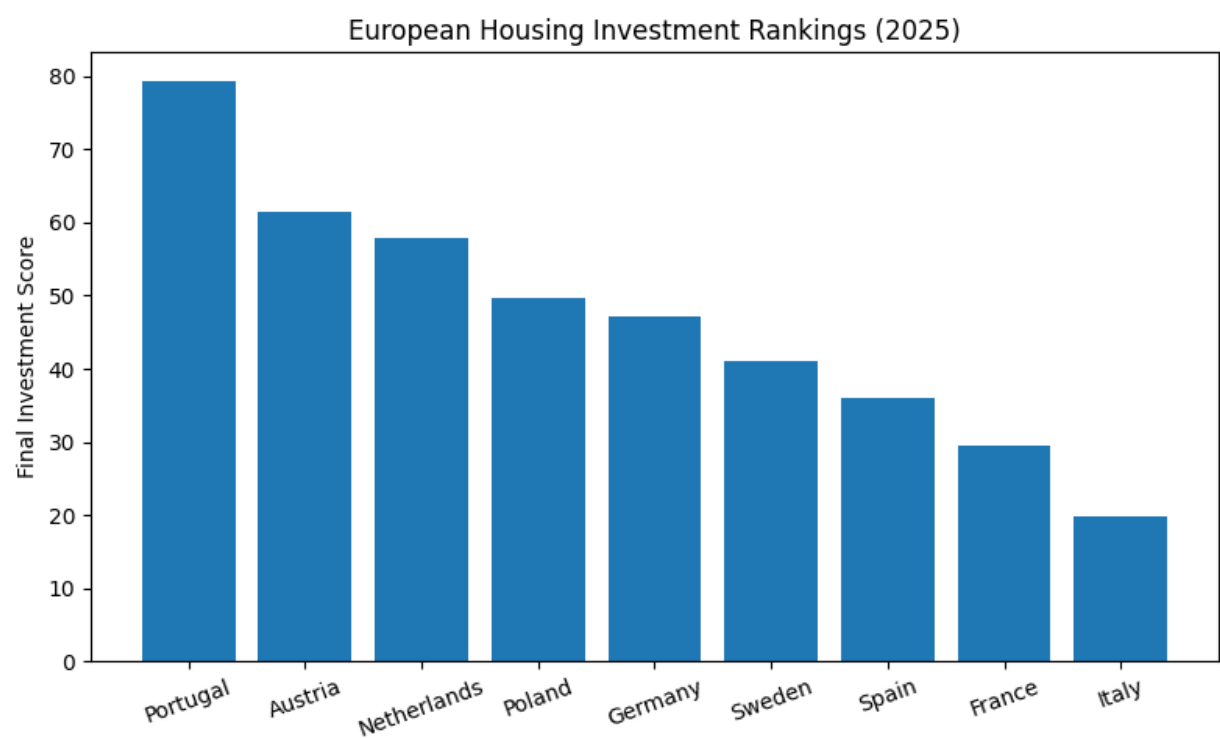

The analysis combines economic and housing indicators sourced from OECD and ECB datasets. Data preparation and feature engineering were completed using Python and pandas, while SQL was used for KPI extraction and analytical querying. Final insights and interactive visualizations were developed in Tableau. Core indicators included:

- Investment Score
- Future Growth Score
- Final Recommendation Score
- Housing Affordability Metrics
- Forecast-Driven Market Outlook

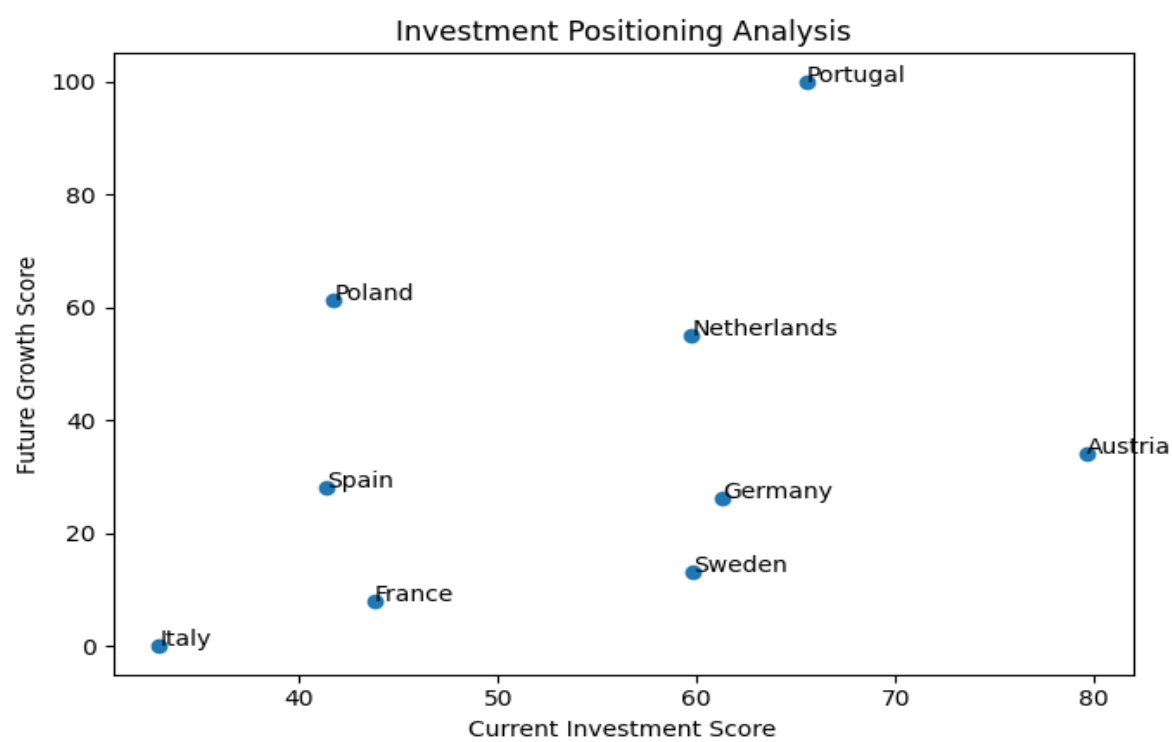

Top Investment Markets

Country	Final Score	Recommendation
Portugal	79.31	Strong Buy (High Confidence)
Austria	61.39	Buy (Good Potential)
Netherlands	57.89	Neutral / Watchlist
Poland	49.62	Neutral / Watchlist
Germany	47.2	Neutral / Watchlist
Sweden	41.13	Avoid / High Risk
Spain	36.1	Avoid / High Risk
France	29.42	Avoid / High Risk
Italy	19.78	Avoid / High Risk

Investment Rankings Overview

Investment Positioning Analysis

Risk Analysis & Key Considerations

Although several markets demonstrated strong investment attractiveness, affordability pressure remains elevated across parts of Europe. Investors should consider:

- Rising housing affordability pressure in Portugal and the Netherlands

- Slowing overall market growth momentum across Europe
- Interest rate sensitivity and financing costs
- Long-term sustainability of rapid market appreciation

The findings suggest that investors should balance growth opportunities with long-term market stability and affordability trends.

Final Investment Recommendations

Best Growth Opportunity: Portugal

Strong forecast-driven growth and high investment attractiveness.

Best Balanced Market: Austria

Stable investment profile with balanced market conditions.

Most Attractive Large Market: Germany

Strong economic positioning and reliable long-term demand.

Markets Requiring Caution: France, Italy, Spain

Lower projected investment attractiveness and weaker growth momentum.

This project demonstrates how data analytics and business intelligence can support real estate investment decision-making through structured analysis, forecasting, and dashboard storytelling. By combining Python, SQL, and Tableau into a unified workflow, the project transforms raw economic and housing data into actionable investment intelligence.
